This is a correction to: Sigrun Halvorsen and others, 2022 ESC Guidelines on cardiovascular assessment and management of patients undergoing non-cardiac surgery: Developed by the task force for cardiovascular assessment and management of patients undergoing non-cardiac surgery of the European Society of Cardiology (ESC) Endorsed by the European Society of Anaesthesiology and Intensive Care (ESAIC), *European Heart Journal*, Volume 43, Issue 39, 14 October 2022, Pages 3826â3924, <https://doi.org/10.1093/eurheartj/ehac270>

The following reference was missing from the originally published version of this ESC Guidelines paper:

âFronczek J, Polok K, Devereaux PJ, et al. External validation of the Revised Cardiac Risk Index and National Surgical Quality Improvement Program Myocardial Infarction and Cardiac Arrest calculator in noncardiac vascular surgery. *Br J Anaesth*. 2019;123(4):421-429. doi:10.1016/j.bja.2019.05.02â

The reference should have been cited in the following sentence in section 4.1.1. General risk calculators:

âIn vascular surgery, both risk calculators have shown moderate accuracy with an area under curve (AUC) of 0.64 (95% CI, 0.57â0.70) for ACS NSQIP and 0.60 (95% CI, 0.54â0.65) for

RCRI, due to underestimation of the risk of MI.â

This has been corrected.
